

SmartQuery AI

"Unlock instant insights into your data with conversational assistant"

SmartQuery AI is an intelligent conversational chat assistant designed to simplify access to any data like sales, support tickets or inventory data. It empowers businesses with instant and accurate insights through a user-friendly chat interface, streamlining decision-making and operational efficiency.

Key Features

► Natural Language Queries

- .Allow users to ask questions in plain language (e.g., "What were last month's sales for Product A?")
- .Provide detailed responses or summaries tailored to the query.
- .Model trained to understand the jargon specific to the client/Industry

► Integration with Existing Systems

- Seamlessly connect to existing systems for streamlined data access.

► Data Insights

- .Access the inventory count data or sales performance or customer support tickets

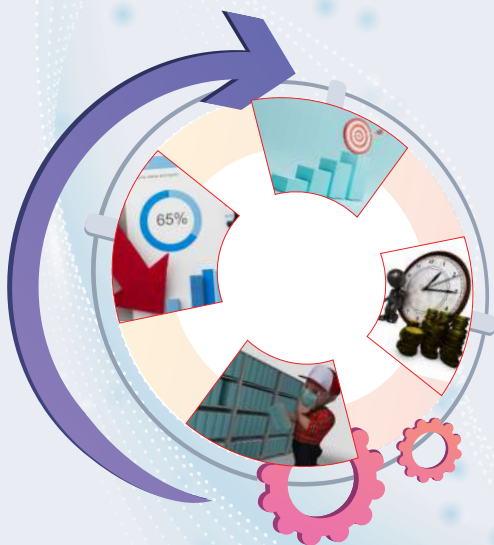

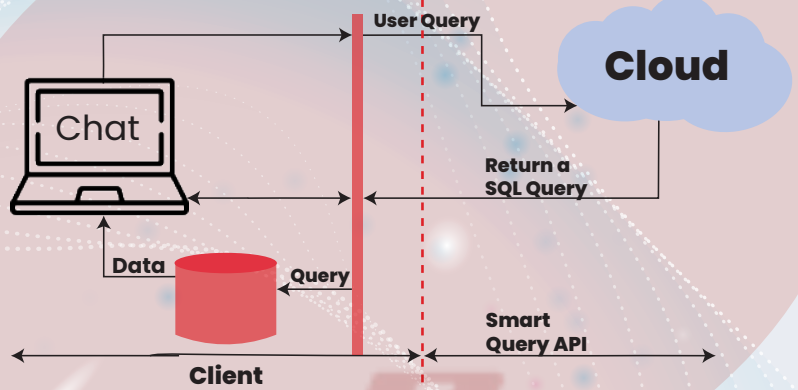

Benefits

- **Time Efficiency** - Eliminate the need for manual data extraction and analysis, Get instant answers to complex queries, saving valuable time.
- **Cost Savings** - Reduce reliance on IT teams for data retrieval, Minimize losses due to overstocking or stockouts with predictive insights.

- **User-Friendly Interface** - Simplified access for non-technical users through intuitive chat interactions, No specialized training required.

Use Cases

- **Sales Teams** - Quickly access sales performance metrics, identify top-performing products, and adjust strategies.
- **Inventory Managers** - Monitor stock levels, forecast demand, and automate reorder points to avoid disruptions.
- **Customer Support Engineers** - Quickly access ticket history before responding to customers on open tickets with the same scenario
- **Business Owners/Executive** - Gain a 360-degree view of business operations with insights into sales and inventory.
- **Retail Chains** - Manage multi-location inventory and align stock levels with local demand.

Client Registration

Step-1 -Company Info

- Company Logo
- Company Name
- Short URL (4char)
- Contact No
- Address

Step-2 -Data

- Template with sample data
- Pre Req: Denormalized data

Step-3 -API

- Smart Query API URL
